

OIL AND GAS PROJECT MANAGEMENT COURSES

(1) Petroleum Project Management

WHO SHOULD ATTEND

This course is designed for engineers, technicians and project stakeholders involved in making critical decisions on projects.

COURSE OBJECTIVES

This course will provide an integrated approach to the most specific and efficient project management best practices and principles related to design, procurement, construction activities, maintenance, and upgrade turnarounds at downstream facilities in the oil and gas industry. This course will equip you with the following:

- To define specific project phases (according to the project type) and execute them skillfully.
- To develop control techniques and progress report documents
- To use extensive checklists to make sure all bases are covered.
- To apply project management skills to your current projects.
- To utilize project management software as an effective tool.
- How to develop sustainable, repeatable knowledge management for projects

CONTENT

The course is taught using a combination of teaching strategies, facilitated discussions, and hands-on exercises using “real world” project examples related to facilities design, procurement, construction, and turnarounds.

INTENDED FOR

- Maintenance Engineers/Technicians
- Operations Engineers/Technicians
- Engineering
- Purchasing (including team leaders and managers)
- Planners
- Project stakeholders
