

Refractory Materials in Cement Industry

Objectives:

Refractory technology is changing so rapidly and the price of refractory materials is continuing to escalate so rapidly, that all users must conduct regular value audits on their refractory purchases

This training programme provides a great value in understanding the relationship between Refractories and process operations, responsibilities of refractory in cement industry, installations and how to be involved in a production function

Participants:

The course addresses: Production Engineers, Maintenance Engineers, Process Engineers and Kiln Mechanical Maintenance Engineers and Refractory Supervisors

Course contents:

- Introduction
- Kiln & Refractory Fundamental Information
- Refractory Materials in Cement Industry
- Choosing of Refractory Materials in Cement Industry
- Problems of Refractory Materials and how to solve them
- Follow up of Refractory Materials in Cement Industry
